

School ERP Database Reference

MySQL Tables vs MSSQL (Old ERP) Tables

Project Architecture

The School ERP uses two databases:

1. MySQL (Laravel Database)

Purpose:

- Application data
- Masters
- Users
- Exams
- Marks
- Results
- Allocations

2. Microsoft SQL Server (Old ERP Database)

Purpose:

- Student master data
- Roll numbers
- Parent details
- Standard mapping
- Division mapping

MySQL Tables

The following tables are currently used in the Laravel School ERP.

Authentication & Security

```
users
roles
permissions
role_has_permissions
model_has_roles
model_has_permissions
```

password_reset_tokens
sessions

Academic Masters

academic_years
sections
standards
divisions
subject_types
subjects
standard_subjects

Student Related

student_skill_subjects

Examination

exam_masters
exam_subjects

Teacher Allocation

teacher_class_allocations
teacher_subject_allocations
teacher_marks_status

Marks & Results

```
student_marks  
student_results  
student_result_details
```

Laravel System Tables

```
cache  
cache_locks  
jobs  
job_batches  
failed_jobs  
migrations
```

Frequently Used MySQL Tables

These are the tables used almost daily by the system:

```
academic_years  
sections  
standards  
divisions  
subjects  
subject_types  
standard_subjects  
  
exam_masters  
exam_subjects  
  
student_marks  
student_results  
student_result_details  
  
teacher_class_allocations  
teacher_subject_allocations  
  
student_skill_subjects  
  
users
```

```
roles
permissions
```

MSSQL (Old ERP) Tables

Connection Name:

```
sqlsrv_olderp
```

FeeMstStudent

Purpose:

```
Student Name
Parent Information
Mobile Number
Admission Information
```

Fields commonly used:

```
Studentid
studname
fathermobile
```

Example:

```
DB::connection('sqlsrv_olderp')
->table('FeeMstStudent')
```

SubStudentMst

Purpose:

```
Student Academic Records
Roll Numbers
```

Class Allocation
Division Allocation

Fields commonly used:

Studentid
yearid
standardid
divisionid
rollno
regno

Example:

```
DB::connection('sqlsrv_olderp')  
->table('SubStudentMst')
```

StandardMst

Purpose:

Old ERP Standard Mapping

Used by:

```
StudentHelper::getStudentsDirectERP()
```

Fields:

standardid
name
yearid

DivisionMst

Purpose:

Old ERP Division Mapping

Fields:

divisionid
division
standardid
yearid

MSSQL Tables Currently Used in Project

The School ERP currently fetches data from only these 4 MSSQL tables:

FeeMstStudent
SubStudentMst
StandardMst
DivisionMst

Data Flow

Student Search Screen

```
graph TD
    A[Laravel Standard] --> B[StandardMst]
    C[Laravel Division] --> D[DivisionMst]
    B --> E[Standard + Division]
    D --> E
    E --> F[SubStudentMst]
    F --> G[Student Details]
    G --> H[FeeMstStudent]
```

StudentHelper Data Flow

Current logic:

```
academic_year
  ↓
StandardMst
  ↓
DivisionMst
  ↓
SubStudentMst
  ↓
FeeMstStudent
  ↓
Student Dropdown
```

Report Card Module

Student Name Source:

```
FeeMstStudent.studname
```

Roll Number Source:

```
SubStudentMst.rollno
```

Exam Result Source:

```
MySQL student_results
```

Subject Marks Source:

MySQL student_marks

Skill Subject Source:

MySQL student_skill_subjects

Total Tables Summary

MySQL Tables

Approximately:

25 to 35 tables

depending on Laravel system tables and permission tables.

MSSQL Tables Used

Currently:

4 tables

FeeMstStudent
SubStudentMst
StandardMst
DivisionMst

Most Important Tables

MySQL

academic_years
sections
standards
divisions

```
subjects
subject_types

exam_masters
exam_subjects

student_marks
student_results
student_result_details

teacher_class_allocations
teacher_subject_allocations

student_skill_subjects
```

MSSQL

```
FeeMstStudent
SubStudentMst
StandardMst
DivisionMst
```
